Compatible with
Home Assistant

powered by
ESPHome

First Time Configuration

NOTE: Make sure you have ESPHome addon installed on you Home Assistant before starting

- Connect the device to a power supply using the USB-C connector
- Go to your Home Assistant and you should have a message that a new device has been discovered, click on it!
- You can otherwise go to Settings/Device and you will find it there
- Click on the CONFIGURE button and you will be prompted to enter your WiFi credential (SSID and password) please do it
- Click on CLOSE
- Now go to your ESPHome addon web interface
- You should have a new device ready to be “adopted”
- Click on ADOPT
- Give to the device the name of your choice and click again ADOPT
- You will be prompted with this device encryption key, if you can please copy and save it, it will be easier if in the future you need to recover this device in case of Home Assistant / ESPHome reinstallation
- Press on INSTALL to begin download, compile and install the updated firmware for your device
- Wait for process to be completed and if all is ok click on STOP to close the window
- As last step go to Home Assistant “Settings/Devices” and you should see a new ESPHome device discovered with the name you just choose, click on its CONFIGURE button then click enter
- Congratulations, the setup is complete and you can start using your new Presence Device
